

Network Protector Fuse with Fuse Cover Assembly

The Network Protector Fuse with Fuse Cover Assembly is an integral design providing a safe and easy way to install and un-install Y and Z styles fuses. The Fuse Assembly features captive nuts (with lock washers), eliminating the chance of dropping hardware while installing or removing the fuse. The Fuse/Fuse Cover Assembly can be removed and installed in a much more efficient manner than traditional fuses, reducing the number of components handled. These features together simplify the task and improve worker safety.

The new Richards Fuse Cover is made of a non asbestos refractory compound and features a viewing window to easily and safely check if a fuse is blown. The Fuse Cover allows for a fuse to be removed intact, whether blown or not, with one hand.

Features & Benefits

- Easy and quick installation
- Easily check fuse status via Viewing Window
- Captive Nuts eliminate loose hardware
- One-handed removal
- Reduces risk of dropping components
